

ENTERPRISE DATA CONNECTIVITY FOR A CONNECTED & CONVERGED WORLD.

OryxAlign provide an array of high-speed IP connectivity services which connects your business directly to a next-generation national network and the internet. We deliver on ever-increasing bandwidth requirements allowing you to take full advantage of everything cloud-based services has to offer.

TECHNOLOGY AT A GLANCE

OryxAlign are a carrier agnostic connectivity provider who have strategic partnerships with the majority of the UK's largest connectivity carriers and wholesalers.

We take the time to understand our clients' business requirements and propose the right connectivity products to keep them efficiently connected to the world via a full managed connectivity service backed by our 24x7 IT Service Desk.

With more and more applications moving from customer premises and into the cloud, it's essential you can connect your business and workforce reliably and at high speeds.

Our family of data services provide this essential connectivity platform on which you can run your business communications and converge both your voice and internet connections onto a single network, delivering cost savings and assured service quality.

OryxAlign offer a range of connectivity options with speeds ranging from 2Mbps to 10Gbps. Our services are designed & tailored to meet any business requirements and deliver high-performance managed Internet or point-to-point access.

BUSINESS BROADBAND

Our broadband portfolio is a family of superfast internet access products based on the latest ADSL2 & FTTC (fibre to the cabinet) technologies delivering downstream speeds of up to 80Mbps.

EFM

Ethernet First Mile (EFM) delivers a high-speed (up to 20Mb/s), symmetrical & uncontended Internet connection for your business. EFM technology uses resilient copper pairs which mean lower costs with a faster installation times.

FIBRE ETHERNET

Unrivalled performance and throughput, our fibre Ethernet connectivity is the highest performing in our portfolio. Synchronous bandwidth options from 10Mb/s up to 1Gb/s means scalable performance connectivity ideal for demanding voice, data, video & cloud services. Backed by our industry leading 99.999% SLA this connectivity can be relied upon to power your business.

MPLS PRIVATE NETWORK

OryxAlign's managed IP-VPN service utilises MPLS technology so your business delivers data, voice, applications and video to any location over our fully meshed converged network.

SIP

Next generation and cost-effective replacement for traditional ISDN lines. It connects your on-premise PBX via broadband, EFM or fibre Ethernet in a SIP layer which will facilitate voice calls with extremely robust business continuity.

KEY BENEFITS

- **Scalable.** Business Internet access as your business grows & requires it
- **Expertise.** Our connectivity services team specialises in the planning, design and implementation of network access
- **Breadth of service.** Our UK network reach covers over 95% of business locations
- **High performance.** No domestic users leaving our network uncongested for our 'business only' high performance managed services

ABOUT ORYXALIGN

OryxAlign is a thriving and vibrant managed technology services provider, with client happiness at the heart of our business. With decades of combined experience, we remove the stress and strains of IT by delivering efficient, practical and affordable managed technology services. We work as your IT partner, not as an outsourced provider.
