

AFFORDABLE NEXT GENERATION BUSINESS COMMUNICATIONS

OryxAlign's **Voice as a Service (VaaS)** offers a revolutionary, next-generation hosted IP telephony which provides advanced system features without the need for expensive hardware, ISDN lines or maintenance contracts. It addresses the need for convergent and cost efficient telecommunications compared to that of traditional telephony.

TECHNOLOGY AT A GLANCE

Our IP telephony platform utilises the vast increases in network capacity and cloud connectivity to remove the need for onsite equipment previously required.

All calls are routed across the internet in IP transit. Instead of buying a telephone system and paying maintenance charges and depreciation, OryxAlign's VaaS allows you to buy a monthly IP license per user on a pay-as-you-grow model.

OryxAlign's VaaS is a network-based centrally hosted multi-tenant infrastructure which brings together a complete set of business telephony features expected from a fully featured enterprise system.

All standard PBX features are included plus 100's more features to ensure the most comprehensive solution. The services are truly scalable and the market ranges from Small and Medium Enterprises (SMEs) to multi-site and multi-national organisations.

IT'S FUTURE PROOF

An onsite telephone system stays the same from the day you bought it, unless you pay significant sums for upgrades, with hosted telephony, the system is constantly being updated centrally at no extra cost.

IT'S FEATURE RICH

Gain all the features that you would expect of an enterprise grade system no matter how small the number of users.

KEY BENEFITS

- Intuitive automated attendant
- Call recording as standard
- Voicemail for each user
- Music on hold
- Group call pickup
- Call forwarding
- Unlimited hunt groups
- Cisco/Snom/Polycom handsets
- Extension dialling
- Connected line presentation
- Pay-as-you-grow licence pricing model
- 24x7 UK IT Service Desk Support

LOW CAP-EX

With hosted IP, the system is already built, therefore the only upfront charges you will have are for handsets, switches and routers. Switching to an OpEx model can significantly improve your cashflow.

GEOGRAPHICALLY INDEPENDENT

With hosted IP all your locations sit on one network, therefore no matter how many sites you have, you can have one contract, one management portal, one reporting platform and one bill. Between all these sites and remote users, all calls remain free forever.

CRITICAL VOICE CONTINUITY

The ability to communicate with your customers is a critical aspect for any business and voice continuity is the most fundamental aspect of any continuity solution. Major disasters are unlikely but the reality is that most interruptions are everyday events – floods, travel restrictions & systems failure. If the telephony system or area is inaccessible then onsite repairs cannot be made.

An IP voice solution addresses all of these eventualities. It provides a business as usual interim call routing solution that does not just address disaster recovery but ensures that service continues in the first place.

ABOUT ORYXALIGN

OryxAlign is a thriving and vibrant managed technology services provider, with client happiness at the heart of our business. With decades of combined experience, we remove the stress and strains of IT by delivering efficient, practical and affordable managed technology services. We work as your IT partner, not as an outsourced provider.
