

YOUR DATA. MANAGED, PROTECTED & SECURED

Running and building your business and brand is demanding and the protection and availability of your corporate data is critical. As a minimum you need easy-to-manage and worry-free secure data backups which give you peace of mind so that you can focus on the business. OryxAlign partner with eVault to provide an integrated suite of on-premise, cloud, and hybrid data storage & backup solutions.

TECHNOLOGY AT A GLANCE

OryxAlign's data management provides the complete solution for backing up and protecting your corporate data. Made possible via agents installed on servers, desktops or laptops we backup data continuously into the vaults in our datacentres.

KEY BENEFITS

- Simple & automatic data protection
- No capital expense or investment
- Centralised management & monitoring
- FIPS-approved AES encryption end-to-end
- Agent-initiated backups
- Consolidate cross platform & multi hypervisor backup & recovery
- Bare metal system recovery agents
- Front-end data deduplication
- Intuitive client portal
- Pay-as-you-grow pricing model
- 24x7 UK IT Service Desk Support

No IT professional questions the necessity of data backup, but you want to know your data is absolutely secure before, during, and after the backup process. Unlike legacy tape-based solutions, which are vulnerable to theft, disappearance and deterioration. The powerful, reliable security model employed by OryxAlign's eVault backup and recovery solutions guards against data loss and leakage from beginning to end.

OryxAlign's data management automates the data protection process and provides de-duping and data-transfer technology, a web portal, and end-to-end security.

DATA SECURITY & ENCRYPTION

eVault provides end-to-end encryption with your data being encrypted every step of the backup process from the source server through data transmission and while in storage. Before your data leaves the server, it's protected at the level you choose: 256-bit AES (Advanced Encryption Standard), 128-bit AES, 112-bit 3DES, or 128-bit Blowfish encryption.

As your data travels over the Internet to the OryxAlign vault, you can relax knowing it's protected by 128-bit AES encryption and because eVault deduplication ensures you back up only new or changed blocks, you simply expose much less data during the actual backup.

PROTECTING YOUR MOBILE WORKFORCE

Today's fast-growing highly mobile workforce is placing new demands on IT. As data growth increases, and that data increasingly finds its way onto laptops, the threats of data loss and security breaches have also increased. To guard corporate data on endpoints at all times, companies can follow a number of data protection and data security best practices. Incorporating the eVault best practices can help you control sensitive information to mitigate the risk of regulatory and financial exposure and keep IT costs in check.

- Audit data on all end-point devices
- Classify data based on criticality and impact of loss
- Define the Recovery Objectives
- Manage end point security policies
- Communicate to all employees

eVault's Endpoint Protection enables complete control to corporate data assets and in order to meet regulatory requirements while enabling an organisations mobile employees to be as productive and effective as possible.

ABOUT ORYXALIGN

OryxAlign is a thriving and vibrant managed technology services provider, with client happiness at the heart of our business. With decades of combined experience, we remove the stress and strains of IT by delivering efficient, practical and affordable managed technology services. We work as your IT partner, not as an outsourced provider.
