INTELLIGENT INFRASTRUCTURE DELIVERING CORE BUSINESS BENEFITS FROM DAY ONE

The IT infrastructures of today are being strained to breaking point by the adoption of new technologies and applications.

The potential business implications are significant: inability to serve customers effectively, supply chain delays, slower product development, compromised security, and more.

At OryxAlign we create and implement intelligent infrastructures; ones that can predict, learn, optimize, protect and self-heal.

KEY FEATURES OF OUR SERVICES

- Industry accredited infrastructure engineers (Microsoft, VMware & Cisco) ● PRINCE2 accredited project management team ● Detailed & comprehensive pre-project implementation plans
- Non-disruptive project delivery ● Consultative approach focusing on industry best practises
- Improving operational efficiency & performance ● Infrastructure efficiency audits ● VCIO capability
- Technology roadmap 100% partnership guarantee

Ultimately, the value of an intelligent infrastructure is measured not simply in IT capabilities and resource, but in the new business outcomes made possible which are a more flexible and agile business, the ability to serve customers more effectively, improved support for collaboration and the user community and more predictable cost reductions.

The breadth of technical skill across the OryxAlign project team is vast and we employ the best talent in the industry to ensure that all our infrastructure projects are delivered accurately, on time and on budget.

We focus on delivering improved operational efficiency and performance through the implementation and adoption of the right technology to successfully grow organisations. So whether you're looking for a way to improve or expand your existing infrastructure environment, or considering a move to the cloud, OryxAlign is your perfect technology partner.

Imagine how an intelligent and highly available infrastructure would unlock the agility in your organisation, creating competitive advantage and increased operational efficiency and performance.

ABOUT ORYXALIGN

OryxAlign is a thriving and vibrant managed technology services provider, with client happiness at the heart of our business. With decades of combined experience, we remove the stress and strains of IT by delivering efficient, practical and affordable managed technology services.

We work as your IT partner, not as an outsourced provider.

NETWORK IMPLEMENTATIONS
Building networks & infrastructure from the ground up specifically tailored to meet the requirements of your organisation and ensuring a return on investment over a predicted life-span.

VIRTUALISATION
Focussing on infrastructure high-availability our VMware accredited consultants virtualise where they can in order to optimise and consolidate.

The business case for virtualisation has been proven when it comes to increasing IT productivity and responsiveness.

AUTOMATION & INTELLIGENCE
Using industry leading automation deployment and optimization technologies, we focus on exceeding our clients expectations throughout our implementations. It's a win-win scenario.

TECHNOLOGY REFRESH
Keeping our clients' infrastructure current and reliable to power their business is vital. We refresh servers, networks, desktops & printers as part of our ongoing managed technology service.

We are also able to provide equipment financing and leasing to suit requirements.

WAN IMPLEMENTATIONS
Connectivity is evolving rapidly and we ensure our clients are not left behind. From complex MPLS design to the basic fibre circuits, our project and provisioning team are there to work with you and ensure seamless service delivery when upgrading your connectivity.

WIRELESS INFRASTRUCTURE
We are accredited Meraki, Aerohive & Meru installers and deliver feature rich and high-performance wireless solutions, indoor & outdoor.

Wireless connectivity is becoming the new standard and intelligent AP's are adding a huge amount of value to organisations.

CLOUD MIGRATIONS
Cloud computing does not suit all businesses, but it has whetted the appetites of most. The cloud business models are now capable of adapting flexibly and quickly to the needs of a business, and serve to shift capital expenditure to operational expenditure which is an increasingly attractive value proposition.

We ensure that your journey to the cloud is the right path for your business and if it is, that you take the right road.

NETWORK SECURITY ENHANCEMENTS
Network & perimeter security is critical to every organisation. Our infrastructure team are highly trained in security centric infrastructure implementations which provide data protection and technology peace of mind.

APPLICATION TESTING & IMPLEMENTATION
Ensuring our clients' infrastructure is adequately resourced to deal with the demands of powerful applications is key

Our infrastructure team provide the consultancy & vendor management needed for successful application delivery and integration.
